Separate module-wise E2E and recognition performance

ACTUAL MODULE E2E · source 13977f13609a · no training / no physical acceptance

Native complete: False · Corpus execution complete: False · Main-corpus accuracy targets met: False

444 source-discovered native methods; 0 actual native outcomes. 1536/4752 model observations. Four explicitly paired API34 profiles: light/dark × portrait/landscape. Bundled model weights are unchanged; application/selection code is identified by the exact execution source. No training.

Additional public scene observations (separate from4752): 8/8; execution complete=True; exact=0. Includes unsupported French as a capability-limit challenge, not French support.

Accuracy targets fixed before execution: OCR CER≤0.20, normalized English speech WER≤0.35, silence must remain empty. These are measurement flags, not an assertion that every difficult input passes. Failures, hallucinations, errors and missing observations remain visible. Execution completion is not an accuracy pass.

Corpus, measurement and visibility boundaries

ACTUAL MODULE E2E · source 13977f13609a · no training / no physical acceptance

OCR:384 deterministic rendered conditions, 8 source templates (7 kind labels) ×4 font families ×3 sizes ×2 polarities ×2 geometry/rotation settings. Two input sizes:1.12M/2.4M pixels. Input polarity is separate from app theme. Synthetic fonts are not physical photos/handwriting, universal scripts or the supplied private image. Input font variety does not qualify recovered font/style fidelity.

Speech:200 distinct licensed CMU ARCTIC utterances,100 each KSP/SLT, four conditions plus four silence controls =804 inputs, repeated on four UI profiles. Only2 speakers reading100 distinct prompts, not804 people or804 independent scripts. English read speech; not spontaneous dictation, all accents, multilingual or microphone/noise capture. Default bundled Vosk is measured; large experimental Whisper corpus evaluation remains unqualified.

Ground truth is the original public transcript or generated source text, never the recognizer’s own clean output. CER uses NFC plus ASCII-whitespace normalization and remains case-sensitive. Strict WER additionally lowercases with punctuation retained. English normalized WER additionally replaces everything except a–z, digits and apostrophes with separators; it does not normalize number words or contractions. Silence uses denominator1 count convention, not ordinary corpus accuracy.

Timing is emulator wall clock for recognition plus scoring and transcript codec/dedup/source-preservation checks; fixture synthesis excluded. Initialization is included; Vosk constructs and closes its native model for every transcription, while materialized model files may be warm. Different CI hosts/load make physical-latency or causal theme-speed comparisons invalid. Report actual ms, bytes, pixels/audio seconds, RTF and sampled heaps; sampled heap is not peak process memory.

Visibility evidence: Native screenshots are paired by orientation and light/dark profile. Recorded resource assertions check real night/orientation. Screenshots support review, not automatic WCAG certification, vendor keyboard coverage or physical gesture approval.

App and runtime are pinned to the exact execution source shown above; model weights are unchanged. Opt-in instrumentation and public evaluation assets never ship in the application. No private logs, supplied screenshots, notes or recordings enter Actions.

01. Notes and checklists

ACTUAL MODULE E2E · source 13977f13609a · no training / no physical acceptance

65 native methods assigned to this module. Captures are ordered by owning source workflow, then scene; actual selected profile outcomes follow.

Read image / OCR · additional public poster and outdoor-sign challenge

ACTUAL MODULE E2E · source 13977f13609a · no training / no physical acceptance

Separate eight-observation study, two original images across four profiles; no training or model changes. French is not supported; this is a capability-limit challenge, not a French-support claim. The historical poster is a pixel fixture, not medical advice. Execution completion does not mean exact OCR. First-call cold setup is included; decode/scoring excluded; not physical tap latency.

Actual 8/8; complete=True; exact strings=0. Raw outputs, fixed references, provenance and native configuration assertions are retained in additional-public-scenes/.
